MINUTES OF MEETING · SYSTEM DEMO & SCOPING

Lead Management & Process Automation

CRM, Campaign Workflows & AI Deduplication

Review of the initial CRM prototype and scoping of additional workflows including WhatsApp campaign automation, task management, and an AI-based image verification tool.

CRM | WhatsApp Automation | AI Vision | Task Management

PREPARED FOR	Abhay, Swapnil, Nidhi & Tushar
PREPARED BY	Gaurav — Solution Architect, Pucho.ai
REFERENCE	**PUCHO-MOM-LEAD-280926**
DATE	28 September 2026
CLASSIFICATION	Private & Confidential
PLATFORM	Voice/Virtual Meeting
KEY SYSTEMS	Pucho Platform, WhatsApp Meta, CTM

01 Meeting Overview

Item	Details
Purpose	Review CRM UI, discuss WhatsApp lead automation & scope AI workflows
Participants	Gaurav (Pucho), Abhay (Client), Swapnil (Client), Nidhi (Client)
Referenced	Tushar (Business Owner)
Language	Hindi & English

3
Modules Scoped

5
Lead Stages

1000
Autos per Campaign

02 Context & Scope

The meeting focused on validating the initial Pucho CRM prototype for lead and complaint management. Discussions expanded to cover automated WhatsApp workflows for the upcoming 'Mukwas' product launch, project-wise task management, and an AI vision solution to detect duplicate auto-rickshaw branding photos.

03 Requirements by Module

CRM Module 1: CRM & Lead Management

sky

- Maintain 5 standard stages: Open, In Progress, Closed, Rejected, Converted.
- Capture leads from Website, Email, Phone, and primarily WhatsApp.
- Must include kanban board, search by city/phone, and user-specific follow-up reminders.
- Investigate CTM (Call Tracking Metrics) or IVR integration to pre-capture City & Name, reducing manual spelling errors by operators.

WA-BOT Module 2: Campaign Automation (Mukwas Launch)

WhatsApp

- Distributor leads: Route directly to the respective Area Sales Manager (ASM).
- Retailer leads: Categorise by area/city and share relevant distributor details.
- Consumer leads: Fully automate the conversation to confirm product choice, present pricing, calculate delivery fees, and confirm intent before CRM entry.

VISION Module 3: AI Image Deduplication (Auto Branding)

AI Model

- Analyze thousands of campaign photos supplied by marketing agencies.
- Identify duplicate photos of the same auto-rickshaw based strictly on the vehicle registration number.
- Dashboard must flag and highlight duplicate submissions automatically.

```
Requires 5-10 sample images from the client to build the custom detection logic.
```

TASKS **Module 4: Task Management** Internal

- Enable project-wise grouping for internal task allocation.
- Configure automated WhatsApp reminders for overdue tasks (e.g., at 10 AM, 2 PM, 6 PM).

04 Key Discussion Points & Observations

#	Observation	Impact
1	Manual lead entry causes misspellings (e.g., City names), breaking filtering logic.	Need IVR/Bot to capture basic details pre-routing to human agents.
2	Past campaigns generated leads but failed on conversion due to manual calling costs.	Mukwas campaign must strictly use automated WhatsApp bot qualification.
3	Marketing agencies submit duplicate photos for auto branding, leading to wasted funds.	Implementing AI vision to detect registration numbers will ensure accurate billing.

05 Systems & Integrations

System	Role in the flow	Owner / Access
Pucho Platform	Core engine for CRM, workflows, and AI vision	Gaurav
WhatsApp Meta API	Automated messaging, campaigns & task reminders	Client / Pucho
CTM / 800-Number	Call tracking and routing integration	TBD

06 Open Questions / Decisions Pending

Q1 Will the CTM system push data via API to Pucho, or will Pucho build the IVR logic internally?

Q2 Are there specific timing rules for Consumer delivery calculations based on the city?

07 Next Steps & Action Items

#	Action	Owner	Timeline
1	Share 5-10 sample auto images & detection criteria	Swapnil	TBD
2	Develop and present AI Image Deduplication demo	Gaurav	TBD
3	Check technical feasibility of IVR/CTM to CRM auto-fill	Gaurav	TBD
4	Share commercial proposals for CRM, Vision, and Tasks	Gaurav	TBD
5	Discuss proposals internally with Tushar for approval	Client Team	TBD

NEXT STEP

Client to provide sample images for the AI model; Gaurav to share commercials for the three scoped modules.

01 Provide Image Samples → 02 Build AI Demo → 03 Submit Commercials → 04 Management Approval
