MINUTES OF MEETING · DISCOVERY SESSION

Lead Management & CRM Automation

Shree Guruji

Discovery discussion to outline requirements for automating lead capture, routing, and end-to-end lifecycle management.

Lead Management | CRM | WhatsApp Automation | Workflow

PREPARED FOR	Nidhir & Swapnil (Shree Guruji)
PREPARED BY	Chintan — Chief Solution Architect, Pucho.ai (Niti.ai)
REFERENCE	PUCHO-MOM-GURUJI-160926
DATE	16 September 2026
CLASSIFICATION	Private & Confidential
PLATFORM	Google Meet
KEY SYSTEMS	Meta, WhatsApp, Outlook, SAP, Field Assist

01 Meeting Overview

Item	Details
Purpose	Requirement gathering for replacing manual lead handling with an automated CRM ecosystem.
Participants	Gaurav (Pucho.ai) · Nidhir (Shree Guruji) · Swapnil (Shree Guruji)
Referenced	Tushar (Shree Guruji)
Language	Hindi & English

5 Lead Sources

2 Rollout Phases

3 Target Personas

02 Context & Scope

Shree Guruji currently manages incoming leads and customer complaints manually using Excel. Inquiries arrive via multiple disjointed channels and are routed by a single person. Pucho.ai will build a unified CRM application to consolidate data capture, track lead lifecycles, and monitor complaint resolutions end-to-end, removing the necessity for third-party tools like Zoho.

03 Core Requirements by Module

PHASE 1 Centralised Lead Tracking

CRM Core & Lead Management

- Consolidate lead inflow from WhatsApp, Meta (Agency), Outlook/Gmail, calls, and website.
- Provide manual lead entry capability for offline or call-based inquiries.
- Establish clear stages for lead lifecycle tracking (e.g., Connected, Qualified).
- Create distinct user access layers so leads can be assigned to the correct personnel.

PHASE 1 Complaint Management Workflow

Support & Resolution

- Capture incoming complaints alongside standard leads.
- Track the complete resolution journey from initiation to closure.
- Ensure visibility into whether assigned personnel have resolved the issue and responded to the customer.

PHASE 2 WhatsApp Qualification Bot

Bot Automation

- Deploy an automated bot on WhatsApp and Meta to handle initial interactions.
- Qualify users immediately by asking 3 key questions: Persona (Distributor/Retailer/Customer), Location, and Requirement.
- Auto-route qualified inquiries to the correct internal owner based on the collected parameters.

Client prioritized this, but agreed to finalize the underlying CRM structure (Phase 1) first to ensure data has a destination.

04 Systems & Integrations

System / Channel	Role in the flow	Owner / Access
Meta (FB/Insta)	Source for ad-driven leads & inquiries	Agency (Credentials required)
WhatsApp / Calls	Direct customer communication channel	Internal CS Team
Outlook / Gmail	Source for corporate deals and direct emails	Internal Team
Field Assist (SFA)	Existing sales tracking system (Reference only)	Internal Team
SAP / Pine HR	Existing ERP and HR systems (Reference only)	Internal Team

05 Data & Access Dependencies

- Sample data sheet (Excel) mapping out current lead tracking formats (4-5 rows minimum).
- Comprehensive list of required Lead Sources.
- Comprehensive list of Lead Types (e.g., Corporate, Distributor, Retailer, Complaint).
- Comprehensive list of desired Lead Stages.

06 Next Steps & Action Items

#	Action	Owner	Timeline
1	Create a WhatsApp communication group for project tracking.	Gaurav	Immediate
2	Share requirement gathering document and MoM.	Gaurav	Immediate
3	Provide sample Excel data, lead types, sources, and workflow stages.	Swapnil	TBD
4	Develop and present the Phase 1 CRM prototype based on provided data.	Gaurav	2-3 Working Days

NEXT STEP

Client to define and share Lead Sources, Types, and Stages to unblock prototype development.

01 **Share Variables** → 02 **Build Prototype** → 03 **Review Session** → 04 **Deploy App**

NEXT MEETING

Review of the Phase 1 CRM Prototype, tentatively scheduled for early next week (Monday/Tuesday).
